Preface

The Encyclopedia of Complexity and System Science is an authoritative single source for understanding and applying the basic tenets of complexity and systems theory as well as the tools and measures for analyzing complex systems in science, engineering and many areas of social, financial and business interactions. It is written for an audience of advanced university undergraduate and graduate students, professors, and professionals in a wide range of fields who must manage complexity on scales ranging from the atomic and molecular to the societal and global. Each article was selected and peer reviewed by one of our 36 Section Editors with advice and consultation provided by our 15 Board Members and Editor-in-Chief. This level of coordination assures that the reader can have a level of confidence in the relevance and accuracy of the information far exceeding that generally found on the World Wide Web. Accessibility is also a priority and for this reason each article includes a glossary of important terms and a concise definition of the subject.

Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e. g. the spontaneous formation of temporal, spatial or functional structures. They are therefore adaptive as they evolve and may contain self-driving feedback loops. Thus, complex systems are much more than a sum of their parts. Complex systems are often characterized as having extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The conclusion is that a reductionist (bottom-up) approach is often an incomplete description of a phenomenon. This recognition, that the collective behavior of the whole system cannot be simply inferred from the understanding of the behavior of the individual components, has led to many new concepts and sophisticated mathematical and modeling tools for application to many scientific, engineering, and societal issues that can be adequately described only in terms of complexity and complex systems.

Examples of Grand Scientific Challenges which can be approached through complexity and systems science include: the structure, history and future of the universe; the biological basis of consciousness; the true complexity of the genetic makeup and molecular functioning of humans (genetics and epigenetics) and other life forms; human longevity limits; unification of the laws of physics; the dynamics and extent of climate change and the effects of climate change; extending the boundaries of and understanding the theoretical limits of computing; sustainability of life on the earth; workings of the interior of the earth; predictability, dynamics and extent of earthquakes, tsunamis, and other natural disasters; dynamics of turbulent flows and the motion of granular materials; the structure of atoms as expressed in the Standard Model and the formulation of the Standard Model and gravity into a Unified Theory; the structure of water; control of global infectious diseases and also evolution and quantification of (ultimately) human cooperative behavior in politics, economics, business systems and social interactions. In fact, most of these issues have identified nonlinearities and are beginning to be addressed with nonlinear techniques – e. g. human longevity limits; the Standard Model; climate change, earthquake prediction, workings of the earth's interior, natural disaster prediction, etc.

The complex systems mathematical and modeling tools and scientific and engineering applications that comprise the Encyclopedia of Complexity and Systems Science are as follows:

- Agent Based Modeling and Simulation
- Applications of Physics and Mathematics to Social Science
- Cellular Automata, Mathematical Basis of
- Chaos and Complexity in Astrophysics
- Climate Modeling, Global Warming and Weather Prediction
- Complex Networks and Graph Theory

- Complexity and Nonlinearity in Autonomous Robotics
- Complexity in Computational Chemistry
- Complexity in Earthquakes, Tsunamis, and Volcanoes, and Forecasting and Early Warning of their Hazards
- Computational and Theoretical Nanoscience
- Control and Dynamical Systems
- Data Mining and Knowledge Discovery
- Ecological Complexity
- Ergodic Theory
- Finance and Econometrics
- Fractals and Multifractals
- Game Theory
- Granular Computing
- Intelligent Systems
- Nonlinear Ordinary Differential Equations and Dynamical Systems
- Nonlinear Partial Differential Equations
- Percolation
- Perturbation Theory
- Probability and Statistics in Complex Systems
- Quantum Information Science
- Social Network Analysis
- Soft Computing
- Solitons
- Statistical and Nonlinear Physics
- Synergetics
- System Dynamics
- Systems Biology
- Traffic Management, Complex Dynamics of
- Unconventional Computing
- Wavelets

The 15 members of our Editorial Advisory Board include: Ahmed Zewail of Caltech, Nobel Prize in chemistry, who provided guidance in chemistry and physical biology applications of complexity and systems science; Thomas Schelling, Nobel Prize in Economics, provided guidance in economics and political science applications; Mario J. Molina, Nobel Prize in Chemistry, whose current interests include: atmospheric chemical processes and science-policy issues related to urban and regional air pollution and to global change; Manfred Eigen, Nobel Prize in Chemistry, who is expert in molecular self-organization and evolutionary biotechnology; Benoit B. Mandelbrot of Yale University and Battelle Pacific Northwest Laboratories, Wolf Prize for Physics, who provided guidance in physical, mathematical or social phenomena that are characterized by abundant data but wild variability; Richard E. Stearns, 1993 Turing Award, whose current interests include computational complexity, automata theory, analysis of algorithms and game theory; Pierre-Louis Lions, 1994 Fields Medal, whose interests are nonlinear partial differential equations and applications; Leroy Hood of the Institute for Systems Biology, Lasker Award, whose specialty is systems approaches to biology and medicine; Steven Wolfram, creator of Mathematica®; and Lotfi Zadeh, Honda and Okawa Prizes and IEEE Medal of Honor, whose current interests are fuzzy logic and soft computing. Sadly, Paul Lauterbur, Nobel Prize in Medicine or Physiology, who provided guidance in evolution and origin of life and overall relationship of determinism to complexity passed away during the project. A complete listing of our Board is presented immediately following this Preface.

Our 36 Section Editors, who supervised the 35 Sections, represent some of the best and brightest in their respective fields. It is notable that some are rather young, and yet are highly accomplished, as seems appropriate for the very modern scientific approach inherent in complexity and systems science. The Section Editors have selected both the articles (described below) and also nominated our authors and either provided peer review or supervised outside peer reviewers. A complete listing of the Section Editors is presented immediately following this Preface.

The efforts of the 41 members of our Board and Section Editor team have resulted in near 300 articles on the mathematical and modeling basis of complexity, e. g. fractals and multifractals, cellular automata, game theory, quantum information processing, unconventional computing, ergodic theory, percolation, non-linear ordinary differential equations, non-linear partial differential equations, perturbation theory, probability and statistics, solitons, wavelets, agent based modeling and simulation, complex networks and graph theory, data mining and knowledge discovery, granular computing and soft computing; as well as near 300 articles describing progress using these tools in physics, econometrics, ecosystems, climate prediction, nanoelectronics, complex networks, quantum computing, chemistry, astrophysics, geophysics, systems biology, bioinformatics, medicine, system dynamics, engineering, control and dynamical systems, traffic management, and robotics as well as social, economics and political sciences.

This Encyclopedia in total comprises 592 peer-reviewed, in-depth, 15–20 page articles presented alphabetically as prepared by more than 700 authors. The result is a carefully organized, accessible, and easily searchable 11,000-page reference work that places complexity and systems science at the center of modern scientific, engineering, and societal problems and potential solutions. A complete alphabetized listing of articles, extensive cross-references, glossaries of terms, and a detailed index are all included. We believe that there is no other treatment of this field with near the depth and authority of that prepared by our team of prize winning Board members, Section Editors and authors. This new publication will extend the influence of complexity and systems science to a much wider audience than has been possible up until now.

Acknowledgments

I wish to thank, David Packer, Executive Editor, who proposed the project to me and then provided invaluable counsel in performance of many elements of the publication process.

I wish to express our profound gratitude to Kerstin Kindler, Reference Publisher and Julia Koerting, Editorial Assistant for their outstanding editorial efforts in producing this Encyclopedia. Their interaction with our team of over 700 authors, 36 section editors and 15 board members was highly professional, courteous, pleasant and yet firm, which was integral in obtaining high quality and timely delivery of our manuscripts. Their mastery of formal as well as idiomatic English facilitated many of these interactions.

Robert A. Meyers
Editor in Chief
Larkspur, California

Topical Table of Contents

Agent Based Modeling and Simulation, Section Editor: Filippo Castiglione

Agent Based Computational Economics
Agent Based Modeling and Artificial Life
Agent Based Modeling and Computer Languages
Agent Based Modeling and Simulation, Introduction to
Agent Based Modeling, Large Scale Simulations
Agent Based Modeling, Mathematical Formalism for
Agent-Based Modeling and Simulation
Cellular Automaton Modeling of Tumor Invasion
Computer Graphics and Games, Agent Based Modeling in
Embodied and Situated Agents, Adaptive Behavior in
Interaction Based Computing in Physics
Logic and Geometry of Agents in Agent-Based Modeling
Social Phenomena Simulation
Swarm Intelligence

Autonomous Robotics, Complexity and Nonlinearity in, Section Editor: Warren Dixon

Adaptive Visual Servo Control
Cognitive Robotics
Complexity and Non-Linearity in Autonomous Robotics, Introduction to
Continuum Robots
Distributed Controls of Multiple Robotic Systems, An Optimization Approach
Distributed Robotic Teams: A Framework for Simulated and Real-World Modeling
Foraging Robots
Human Robot Interaction
Image Based State Estimation
Modular Self-Reconfigurable Robots
Motion Prediction for Continued Autonomy
Multiple Mobile Robot Teams, Path Planning and Motion Coordination in
Neuro-fuzzy Control of Autonomous Robotics
Self-replicating Robotic Systems
Software Architectures for Autonomy

Cellular Automata, Mathematical Basis of, Section Editor: Andrew Adamatzky

Additive Cellular Automata
Algorithmic Complexity and Cellular Automata
Cellular Automata and Groups
Cellular Automata and Language Theory
Cellular Automata as Models of Parallel Computation
Cellular Automata in Hyperbolic Spaces

Cellular Automata Modeling of Physical Systems
 Cellular Automata on Triangular, Pentagonal and Hexagonal Tessellations
 Cellular Automata with Memory
 Cellular Automata, Classification of
 Cellular Automata, Emergent Phenomena in
 Cellular Automata, Universality of
 Chaotic Behavior of Cellular Automata
 Dynamics of Cellular Automata in Non-compact Spaces
 Ergodic Theory of Cellular Automata
 Evolving Cellular Automata
 Firing Squad Synchronization Problem in Cellular Automata
 Gliders in Cellular Automata
 Growth Phenomena in Cellular Automata
 Identification of Cellular Automata
 Mathematical Basis of Cellular Automata, Introduction to
 Phase Transitions in Cellular Automata
 Quantum Cellular Automata
 Reversible Cellular Automata
 Self-organised Criticality and Cellular Automata
 Self-Replication and Cellular Automata
 Structurally Dynamic Cellular Automata
 Tiling Problem and Undecidability in Cellular Automata
 Topological Dynamics of Cellular Automata

Chaos and Complexity in Astrophysics, Section Editor: Steve N. Shore

Acceleration Mechanisms
 Astronomical Time Series, Complexity in
 Astrophysics, Chaos and Complexity in
 Astrophysics: Dynamical Systems
 Chaos and Complexity in Astrophysics, Introduction to
 Cosmic Gravitational Background, Stochastic
 Cosmic Strings
 Exobiology (theoretical), Complexity in
 Exobiology and Complexity
 Orbital Dynamics, Chaos in
 Self-Organization in Magnetohydrodynamic Turbulence
 Space Plasmas, Dynamical Complexity in
 Stellar Dynamics, N-body Methods for
 Topological Magnetohydrodynamics and Astrophysics

Climate Modeling, Global Warming and Weather Prediction, Section Editor: Hartmut Grassl

Abrupt Climate Change Modeling
 Climate Change and Agriculture
 Climate Change and Human Health
 Climate Change, Economic Costs of
 Climate Modeling, Global Warming and Weather Prediction, Introduction to
 Cryosphere Models
 Regional Climate Models: Linking Global Climate Change to Local Impacts
 Single Column Modeling of Atmospheric Boundary Layers
 and the Complex Interactions with the Land Surface

Complex Networks and Graph Theory, Section Editor: Geoffrey Canright

Community Structure in Graphs
Complex Gene Regulatory Networks – From Structure to Biological Observables: Cell Fate Determination
Complex Networks and Graph Theory
Complex Networks, Visualization of
Food Webs
Growth Models for Networks
Human Sexual Networks
Internet Topology
Link Analysis and Web Search
Motifs in Graphs
Non-negative Matrices and Digraphs
Random Graphs, A Whirlwind Tour of
Synchronization Phenomena on Networks
World Wide Web, Graph Structure

Complexity in Computational Chemistry, Section Editor: Danail Bonchev

Biochemistry, Chaotic Dynamics, Noise, and Fractal Space in
Biological Complexity and Biochemical Information
Biological Development and Evolution, Complexity and Self-Organization in
Cellular Automata Modeling of Complex Biochemical Systems
Composites, Multifunctional
Computational Chemistry, Introduction to Complexity in
Computer-Aided Design of the Reaction Site in Heterogeneous Catalysis
DNA-templated Self-assembly of Protein Arrays and Highly Conductive Nanowires
Drug Design with Artificial Intelligence Methods
Drug Design with Artificial Neural Networks

Robert A. Meyers

President: RAMTECH Limited
Manager, Chemical Process Technology, TRW Inc.
Post-doctoral Fellow: California Institute of Technology
Ph. D. Chemistry, University of California at Los Angeles
B. A., Chemistry, California State University, San Diego

Biography

Dr. Meyers has worked with more than 25 Nobel laureates during his career.

Research

Dr. Meyers was Manager of Chemical Technology at TRW (now Northrop Grumman) in Redondo Beach, CA and is now President of RAMTECH Limited. He is co-inventor of the Gravimelt process for desulfurization and demineralization of coal for air pollution and water pollution control. Dr. Meyers is the inventor of and was project manager for the DOE-sponsored Magnetohydrodynamics Seed Regeneration Project which has resulted in the construction and successful operation of a pilot plant for production of potassium formate, a chemical utilized for plasma electricity generation and air pollution control. Dr. Meyers managed the pilot-scale DoE project for determining the hydrodynamics of synthetic fuels. He is a co-inventor of several thermo-oxidative stable polymers which have achieved commercial success as the GE PEI, Upjohn Polyimides and Rhone-Polenc bismaleimide resins. He has also managed projects for photochemistry, chemical lasers, flue gas scrubbing, oil shale analysis and refining, petroleum analysis and refining, global change measurement from space satellites, analysis and mitigation (carbon dioxide and ozone), hydrometallurgical refining, soil and hazardous waste remediation, novel polymers synthesis, modeling of the economics of space transportation systems, space rigidizable structures and chemiluminescence-based devices.

He is a senior member of the American Institute of Chemical Engineers, member of the American Physical Society, member of the American Chemical Society and serves on the UCLA Chemistry Department Advisory Board. He was a member of the joint USA-Russia working group on air pollution control and the EPA-sponsored Waste Reduction Institute for Scientists and Engineers.

Dr. Meyers has more than 20 patents and 50 technical papers. He has published in primary literature journals including *Science* and the *Journal of the American Chemical Society*, and is listed in *Who's Who in America* and *Who's Who in the World*. Dr. Meyers' scientific achievements have been reviewed in feature articles in the popular press in publications such as *The New York Times Science Supplement* and *The Wall Street Journal* as well as more specialized publications such as *Chemical Engineering and Coal Age*. A public service film was produced by the Environmental Protection Agency of Dr. Meyers' chemical desulfurization invention for air pollution control.

Scientific Books

Dr. Meyers is the author or Editor-in-Chief of 12 technical books one of which won the Association of American Publishers Award as the best book in technology and engineering.

Encyclopedias

Dr. Meyers conceived and has served as Editor-in-Chief of the Academic Press (now Elsevier) *Encyclopedia of Physical Science and Technology*. This is an 18-volume publication of 780 twenty-page articles written to an audience of university students and practicing professionals. This encyclopedia, first published in 1987, was very successful, and because of this, was revised and reissued in 1992 as a second edition. The Third Edition was published in 2001 and is now on-line. Dr. Meyers has completed two editions of the *Encyclopedia of Molecular Cell Biology and Molecular Medicine* for Wiley VCH publishers (1995 and 2004). These cover molecular and cellular level genetics, biochemistry, pharmacology, diseases and structure determination as well as cell biology. His eight-volume *Encyclopedia of Environmental Analysis and Remediation* was published in 1998 by John Wiley & Sons and his 15-volume *Encyclopedia of Analytical Chemistry* was published in 2000, also by John Wiley & Sons, all of which are available on-line.

Editorial Board Members

PROFESSOR MANFRED EIGEN *
of the MPI for Biophysical Chemistry
1967 Nobel Prize in chemistry
Current interests include: molecular self-organization
and evolutionary biotechnology.
* Informal Advisor

PAUL C. LAUTERBUR† (1929–2007)
2003 Nobel Prize in Medicine or Physiology
for magnetic resonance imaging
Current interests include: molecular imprints,
origin of life, and complexity versus determinism.

LEROY HOOD
Institute for Systems Biology
1987 Lasker Award
2002 Kyoto Prize and
2003 Lemelson-MIT Prize
Current interests include: systems approaches
to biology and medicine.

PIERRE-LOUIS LIONS
1994 Fields Medal
Current interests include: nonlinear partial differential
equations and applications

PROFESSOR BENOIT B. MANDELBROT
Sterling Professor Emeritus of Mathematical Sciences at
Yale University
1993 Wolf Prize for Physics and the
2003 Japan Prize for Science and Technology
Current interests include: seeking a measure of order in
physical, mathematical or social phenomena that are
characterized by abundant data but wild variability.

RICHARD E. STEARNS
1993 Turing Award for foundations
of computational complexity
Current interests include: computational complexity,
automata theory, analysis of algorithms, and game theory.

MARIO J. MOLINA
1995 Nobel Prize in Chemistry for atmospheric
chemistry, particularly the formation and decomposition
of ozone
Current interests include: atmospheric chemical processes,
and science-policy issues related to urban and regional air
pollution and to global change.

STEPHEN WOLFRAM
Founder and CEO, Wolfram Research
Creator, Mathematica®
Author, *A New Kind of Science*

THOMAS C. SCHELLING
Distinguished University Professor, University of
Maryland, Emeritus
2005 Nobel Prize in Economics for understanding of
conflict and cooperation through game-theory analysis
Current interests include: applications of complexity in
economics and political science.

LOTFI A. ZADEH
Professor in the Graduate School,
Computer Science Division
Department of Electrical Engineering
and Computer Sciences
University of California, Berkeley

AHMED ZEWAİL
1999 Nobel Prize in Chemistry for his pioneering
developments in the field of femtoscience
Current interests include: physical biology and complexity

JERROLD E. MARSDEN
Professor of Control & Dynamical Systems
California Institute of Technology

JOSEPH P. S. KUNG
Professor
Department of Mathematics
University of North Texas

JOHN SCOTT
Professor
Department of Sociology
University of Essex

WILLIAM H. K. LEE
Scientist Emeritus
US Geological Survey
Menlo Park, CA 94025, USA

STEVE N. SHORE
Professor of Astrophysics
University of Pisa and Indiana University

Section Editors

Agent Based Modeling and Simulation

FILIPPO CASTIGLIONE

How to Access the Articles

Each Section Editor prepared an introductory article describing their field, the articles comprising the section and the interrelationship of the articles. Thus, our readership can utilize each section introduction as the reference point to the individual articles or can look up individual articles by alphabetical entry. The introductory articles occur alphabetically, under the section name, among the nearly 600 alphabetically listed entries.
